PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

DANGER. Extremely hazardous liquid and vapor under pressure. Fatal if swallowed or inhaled. Corrosive. Causes skin burns and irreversible eye damage, which may have a delayed onset. Do not breathe vapor or gas. Inhalation may cause serious acute illness or delayed lung, nerve, or brain injury. Do not get in eyes, on skin or on clothing.

Note: This product contains chloropicrin, which is very irritating to the upper respiratory tract, and even at low levels can cause painful irritation to the nose, throat, and eyes, producing tearing. If these symptoms occur, leave the fumigation area immediately.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. For more options, follow the instructions for Category H on the chemical-resistance category selection chart. PPE constructed of Saranex, neoprene, and chlorinated polyethylene provide shortterm contact or splash protection against liquid in this product. Longer-term protection is provided by PPE constructed of Viton, Teflon, and EVAL barrier laminates (for example, responder suits manufactured by Life-Guard or Silvershield gloves manufactured by North). Where chemical-resistant materials are required, leather, canvas, or cotton materials offer no protection from this product and must not be worn as the sole article of protection when contact with this product is possible.

When performing tasks with NO potential for contact with liquid fumigant, all handlers (including applicators) must:

- Wear long-sleeved shirt, long pants, shoes and socks.
- Not wear jewelry, goggles, tight clothing, chemicalresistant gloves, rubber protective clothing, or rubber boots when handling. Methyl bromide can be trapped inside clothing and cause skin injury.

Handlers with no potential for contact with liquid fumigant (e.g. shovelers) may wear cotton, leather, or other porous, non-chemical-resistant gloves. If such gloves are exposed to liquid fumigant, they must immediately be removed and discarded.

When performing tasks with potential for contact with liquid fumigant, all handlers (including applicators) must wear:

- Long-sleeved shirt and long pants,
- Chemical-resistant gloves,

barcode area

• Chemical-resistant apron,

2

- Protective eyewear (Do NOT wear goggles), and
- Chemical-resistant footwear with socks.

In addition, when an air-purifying respirator is required under this label's *Directions for Use, Protection for Handlers, Respiratory Protection and Stop Work Triggers* section, handlers (including applicators) must wear a:

 NIOSH-certified full-facepiece air-purifying respirator with cartridges certified by the manufacturer for protection from exposure to methyl bromide at concentrations up to 5 ppm (e.g., a 3M air-purifying respirator equipped with 3M Model 60928 Organic Vapor/Acid Gas/P100 cartridges).

IMPORTANT: A self-contained breathing apparatus (SCBA) is not permitted for routine handler tasks.

If responding to an emergency, when corrective action is needed to reduce air concentrations to acceptable levels, wear an SCBA. Escape-only SCBA respirators must not be used by handlers for responding to emergencies. In addition wear PPE required for potential contact with liquid fumigant.

USER SAFETY REQUIREMENTS

- Follow manufacturer's instructions for cleaning/ maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
- Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them.

USER SAFETY RECOMMENDATIONS

Users should:

- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

		DIDECTIONS FOR LICE
	 ENVIRONMENTAL HAZARDS This pesticide is toxic to mammals and birds. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters or rinsate. Methyl bromide and chloropicrin have certain properties and characteristics in common with chemicals that have been detected in groundwater (methyl bromide and chloropicrin are highly soluble in water and have low adsorption to soil). For untarped applications of methyl bromide and chloropicrin, leaching and runoff may occur if there is heavy rainfall after soil fumigation. PHYSICAL OR CHEMICAL HAZARDS Do not use containers or application equipment made of magnesium, aluminum, or their alloys, as under certain conditions this fumigant may be severely corrosive to such metals. [See the <i>Calibration, Set-up, Repair and Maintenance for Application Rigs</i> section of this labeling for further requirements for application equipment.] Do 	DIRECTIONS FOR USE Restricted Use Pesticide It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only handlers may be in the application block from the start of the application until the entry restricted period ends, and in the buffer zone during the buffer zone period. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
	not permit water to be used to clean the fumigant pressure system, as corrosion will result. Diesel oil is satisfactory for this purpose.	instructions elsewhere on this labeling relieve users from complying with the requirements of the WPS. For the entry restricted period and notification requirements, see the Entry Restricted Period and Notification section of this labeling. PPE For Entry During the Entry-Restricted Period: PPE for entry that is permitted by this labeling is listed in the Personal Protective Equipment (PPE) section of this labeling.

fumigated portion of a field or greenhouse (including	block. For example, for an application consisting of a
furrows, irrigation ditches, roadways). The perimeter of the	seven-handler crew (1 tractor driver, 1 tractor co-pilot,
application block is the border that connects the outermost	4 shovelers, and 1 certified applicator supervising) two
edges of total area treated with the fumigant product.	breathing zone samples could be collected: one sample
Application Rate: The ratio of fumigant mass applied	for the tractor co-pilot and one sample for a downwind
compared to the soil surface area (e.g., lbs of product per	shoveler. Results of previous sampling may indicate which tasks and locations are worst case and therefore
acre). The application rate is expressed on this labeling	representative of all handlers.
in terms of either the "treated area application rate" or the "broadcast equivalent application rate." The "treated	
area application rate" relates to only the rate of fumigant	
applied to the portion of the field that is fumigated (e.g.,	
rate within the bed or strips). The "broadcast equivalent	
application rate" relates to the rate of fumigant applied	
within the entire perimeter of the application block. For	
bedded and strip applications, the "broadcast equivalent	
application rate" must be calculated to determine the	
buffer zone distance required by this labeling. <u>Start of the Application:</u> The time at which the fumigant is	
first delivered/dispensed into the soil in the application block.	
Application is Complete: The time at which the fumigant	
has stopped being delivered/dispensed into the soil and	
the soil has been sealed.	
Entry Restricted Period: This period begins at the	
start of the application and expires depending on the	
application method and if tarps are used when the tarps	
are perforated and removed. Entry into the application	
 block during this period is only allowed for appropriately PPE-equipped handlers performing handling tasks. See 	
the Entry Restricted Period and Notification section for	
additional information.	
Buffer Zone: An area established around the perimeter	
of each application block. The buffer zone must extend	
outward from the edge of the application block perimeter	
equally in all directions.

e e		active ingredient(s) in this product. The training must be
		completed in the time frames listed on the website. The
parcoc		FMP must document the date and location where the soil
		fumigant training program was completed.

	Handlers	Protection for Handlers
	 The following activities are prohibited from being performed by anyone other than persons who have been appropriately trained and equipped as handlers in accordance with the requirements in WPS (40 CFR Part 170): Monitoring fumigant air concentrations; Cleaning up fumigant spills (this does not include) 	Supervision of Handlers: For all applications, from the start of the application until the application is complete, a certified applicator must be at the application block in the line of sight of the application and must directly supervise all persons performing handling activities.
	 emergency personnel not associated with the application); Handling or disposing of fumigant containers; Cleaning, handling, adjusting, or repairing the parts of application equipment that may contain fumigant residues; and Performing any handling tasks as defined by the WPS (40 CFR 170). The following activities are prohibited from being performed 	For handling activities that take place after the application is complete until the entry restricted period expires, the certified applicator is not required to be on-site, but must have communicated in a manner that can be understood by the site owner and handlers responsible for carrying out those activities the information necessary to comply with the label and procedures described in the FMP (e.g., emergency response plans and procedures).
	in the application block from the start of the application until the entry restricted period ends and in the buffer zone during the buffer zone period by anyone other than persons who have been appropriately trained and equipped as handlers in accordance with the requirements	IMPORTANT: This requirement does not override the requirements in the Worker Protection Standard for Agricultural Pesticides for information exchange between operators of agricultural establishments and commercial pesticide applicators.
	 in WPS (40 CFR Part 170). (NOTE: persons repairing and monitoring tarps are considered handlers for the duration listed below). Prohibited activities (except for trained and equipped handlers) include: Participating in the application as supervisors, loaders, drivers, tractor co-pilots, shovelers, cross ditchers, or as other direct application participants; Installing, repairing, operating, or removing irrigation equipment; Performing scouting, crop advising, or monitoring tasks; Installing, perforating (cutting, punching, slicing, poking), or removing tarps; and Repairing or monitoring tarps until 14 days after application is complete if tarps are not perforated and removed during those 14 days. 	The certified applicator must provide Fumigant Safe Handling Information to each handler or confirm that within the past 12 months, each handler has received Fumigant Safe Handling Information in a manner that he/she can understand. Fumigant Safe Handling Information will be provided where this product is purchased or at <u>www.epa.gov/fumiganttraining</u> . For all handling tasks at least two handlers must be present. Exception: After the application is complete, only one trained handler is required to perform fumigant site monitoring tasks outside of the buffer zone.
e area	NOTE: see <i>Tarp Perforation and/or Removal</i> section on this labeling for requirements about when tarps are allowed to be perforated. Handlers do not include local, state, or federal officials per- forming inspection, sampling, or other similar official duties.

	handler taking the air samples. Samples must be taken	sample(s) were greater than or equal to 1.5 ppm
	at the location where the irritation was first experienced.When using monitoring devices to monitor air	for chloropicrin.
	concentration levels, a direct read detection device,	
	such as an electronic device or a colorimetric device	
	(e.g., Matheson-Kitagawa, Draeger, or Sensidyne)	
	must be used. The devices must have sensitivity	
	of at least 1 ppm for methyl bromide and 0.15 ppm	
	for chloropicrin. Persons using direct read detection	
	devices must follow the manufacturer's directions.	
	• When breathing zone samples are required, they must	
	be taken outside respiratory protection equipment and	
	within a 10-inch radius of the handler's nose and mouth.	
	 When full-facepiece air-purifying respirators are worn, air monitoring samples must be collected at least every 	
	2 hours in the breathing zone of a handler performing	
	a representative handling task.	
	• If at any time: (1) a handler experiences sensory	
מ	irritation when wearing a full-facepiece air-purifying	
	respirator, or (2) a methyl bromide air sample is greater	
	than 5 ppm or a chloropicrin air sample is greater	
	than or equal to 1.5 ppm, then all handler activities	
2	must cease and handlers must be removed from the	
	application block and surrounding buffer zone.	
	Handlers can resume work activities without full-	
	facepiece air-purifying respirators if two consecutive	
	breathing-zone samples taken at the handling site at least 15 minutes apart show levels of methyl bromide	
	have decreased to less than 1 ppm and levels of	
	chloropicrin have decreased to less than 0.15 ppm,	
	provided that handlers do not experience sensory	
	irritation. During the collection of air samples a full-	
	facepiece air-purifying respirator must be worn by	
	the handler taking the air samples. Samples must be	

	 Tarp Perforation and/or Removal IMPORTANT: Persons perforating, repairing, removing, and/or monitoring tarps are defined, within certain time limitations, as handlers (see Handlers section), and they must be provided the PPE and other protections for handlers as required on this labeling and in the Worker Protection Standard for Agricultural Pesticides. Tarps must not be perforated until a minimum of 5 days (120 hours) have elapsed after the application is complete, unless a weather condition exists which necessitates early tarp perforation or removal (see Early Tarp Removal for Broadcast Applications Only and Early Tarp Perforation during Flood Prevention Activities for Bedded Applications Only requirements). If tarps are perforated within 14 days after the application is complete, tarp removal must not begin until at least 2 hours after tarp perforation is complete and 2 consecutive methyl bromide air monitoring samples taken at least 15 minutes apart are less than 5 ppm. Air samples must be taken in the breathing zone of the handler. If the 2 consecutive air monitoring samples indicate that methyl bromide levels are: Less than 1 ppm and no sensory irritation is experienced, no respiratory protection is required to begin tarp removal. See the Respiratory Protection and Stop Work Triggers and Personal Protective Equipment (PPE) sections for additional requirements. 	 <i>compromised tarp</i> is a tarp that due to an adverse weather condition is no longer performing its intended function and is creating a hazard. Early Tarp Perforation during Flood Prevention Activities for Bedded Applications Only: Tarp perforation is allowed before the 5 days (120 hours) have elapsed. Tarps must be immediately retucked and packed after soil removal. When perforating any tarp that qualifies for a 60% or greater reduction in buffer zone distance following broadcast shank applications: All handlers must wear an air purifying respirator when perforating the tarp; and Tarp removal must not begin until at least 2 hours after tarp perforation is complete and 2 consecutive air monitoring samples taken at least 15 minutes apart are less than 5 ppm. Air samples must be taken in the breathing zone of the handler. If the 2 consecutive air monitoring samples tare: Less than 1 ppm and no sensory irritation is experienced, no respiratory protection is required to begin tarp removal. See the <i>Respiratory Protection and Stop Work Triggers</i> and <i>Personal Protective Equipment (PPE)</i> sections for additional requirements.
barcode area	 In tarps are not periorated or removed within 14 days arter the application is complete, planting or transplanting may take place while the tarps are being perforated. Each tarp panel used for broadcast application must be perforated. Tarps may be perforated manually ONLY for the following situations: At the beginning of each row when a coulter blade (or other device which performs similarly) is used on a motorized vehicle such as an ATV. In fields that are 1 acre or less. During flood prevention activities. In all other instances, tarps must be perforated (cut, punched, poked, or sliced) only by mechanical methods. Tarp perforation for broadcast applications must be completed before noon. For broadcast applications, tarps must not be perforated if rainfall is expected within 12 hours. Early Tarp Removal for Broadcast Applications Only: Tarps may be removed before the required 5 days (120 hours) if adverse weather conditions have compromised the integrity of the tarp, provided that the compromised tarp poses a safety hazard. <i>Adverse weather</i> includes high wind, hail, or storms that blow tarps off the field and create a hazard, e.g., tarps blowing into power lines and onto roads. A 	have been tested and determined to qualify for buffer reduction credits.

harmful conditions for workers and bystanders and limit the efficacy of the fumigant. However, crop residue	

 [Booklet Copy Area: 6.0" x 8.125"] Prevention of End Row Spillage Do not apply or allow fumigant to spill onto the soil surface. For each injection line either have a check valve located as close as possible to the final injection point or drain/purge the line of any remaining fumigant prior to lifting injection shanks from the soil until the shutoff valve has been closed and the fumigant has been depressurized (passively drained) or purged (actively forced out via air compressor) from the system. Calibration, Set Up, Repair and Maintenance for Application Rigs Brass, carbon steel, or stainless steel fittings must be used throughout. Polyethylene tubing, polypropylene tubing, Teflon® tubing or Teflon®-lined steel braided tubing must be used for all low pressure lines. All other tubing must be Teflon®-lined steel braided. Galvanized, PVC, nylon, or aluminum pipe fittings must not be used. All rigs must include a filter to remove any particulates from the fumigant and for pressurized systems a check valve to prevent backflow of the fumigant into the pressurizing cylinder or the compressed air system. Rigs must include a flow meter or a constant pressure system with orifice plates to ensure the proper amount of fumigant ins applied. To prevent the backflow of fumigant into the compressed gas cylinder at not less than 200 psi during the entire time it is connected to the application rig, if a compressed gas cylinder is used. (<i>This is not required for a compressed is system that is part of the application rig because if the compressed gas cylinder ro compressed air system and the fumigant cylinder. The check valve is best placed on the outlet side of the pressure regulator, and is oriented to only allow compressed air system and the fumigant cylinder. The check valve is best placed on the outlet side of the pressure is maintained in the compressed gas cylinder or compressed air system and the fumigant cylinder. The check valve</i>	<list-item><list-item><list-item><list-item></list-item></list-item></list-item></list-item>
 o Always pressurize the system with compressed gas or by use of a compressed air system before opening the fumigant cylinder valve. Before using a fumigation rig for the first time or when preparing it for use after storage, the operator must 	greenhouse.Seal gaps through which gases could leak into adjacent enclosed areas.

Table 2. Maximum Application Rates for Quarantine Uses
This product may be used as part of a quarantine program as described below.
Quarantine applications with respect to methyl bromide, are treatments to prevent the introduction, establishment and/or spread of quarantine pests (including diseases), or to ensure their official control, where: (i) Official control is that performed by, or authorized by, a national (including state, tribal or local) plant, animal or environmental protection or health authority; (ii) quarantine pests are pests of potential importance to the areas endangered thereby and not yet present there, or present but not widely distributed and being officially controlled. This definition excludes treatments of commodities not entering or leaving the United States or any State (or political subdivision thereof).
USDA-APHIS Quarantine Uses
This product may be used as a soil fumigant at any crop or non-crop site as part of a quarantine program established by the United States Department of Agriculture-Animal and Plant Health Inspection Service (USDA-APHIS) under the Plant Protection Act (7 U.S.C. 7701 et seq.). Limitations including but not limited to application rates and methods and crops and cropping practices must be in accordance with those established by the USDA-APHIS quarantine program.
Other Quarantine Uses (not USDA-APHIS Quarantine uses)
Quarantine use of methyl bromide is restricted to fields used for the production of plant propagative material listed below and unplanted areas immediately adjacent thereto, where all production from the treated fields will be shipped to areas where a plant regulatory authority requires the source or the incoming material to be free of quarantine pests or be accompanied by a certificate issued by a plant regulatory official. Forest Seedlings:
 Conifer and hardwood seedling for reforestation, Christmas tree seedlings Nursery Stock:
 Roses, strawberry transplants, sweet potato slips, caneberry and blueberry nursery stock, fruit and nut trees, garlic transplants, onion transplants, vineyard stock, seed potato, tobacco seed beds, food crop transplants, and other wild or cultivated trees, shrubs, vines and forbs. Ornamental Plants:
 Caladiums, chrysanthemums, flower bulbs, flowering plants, ornamental grasses, rhizomes, shrubs, trees, and other perennials and annuals. Turf or Sod:
For interstate and intrastate shipments to areas that require fumigation with methyl bromide to meet quarantine/phytosanitary requirements
The maximum application rate for quarantine uses shall be 500 lbs of Tri-Con 80/20 per acre, or less if specified in the applicable quarantine/phytosanitary requirements.
The U.S. Federal, state, or local plant, animal, environmental protection or health authority requiring the quarantine application and the particular quarantine/phytosanitary requirement must be identified in the site-specific fumigant management plan. Additionally, the requirement for the treatment (e.g., the State or Federal law) must be listed in the site-specific fumigant management plan.

	[Booklet Copy Area: 6.0" x 8.125"]	·		
	Calculating the Broadcast Equiv To calculate the broadcast equivalent rate for bedded or strip applications the following information is needed: • Pounds of product per treated acre • strip or bed bottom width (inches) • center-to-center row spacing (inches)	Figure 1.	ntion Rate Bedded/Strip A ere application b	
	 application block size (acres) Pounds (or gallons) of product per treated acre is the ratio of total amount of product applied to the size of the total area treated (e.g., the rate of product applied in the bed). For bedded or strip applications, the total area treated is the summation of the area (i.e., length x width) of each treated bed bottom or strip that is located within the application block as shown by the black areas in Figure 1 (e.g., black areas are 0.6A or 60% of the area within the application block). The area of the space between the beds/strips is not factored in the total area treated. 	TREATED AREA	TREATED AREA	TREATED AREA
	The application block size is the acreage within the perimeter of the fumigated portion of a field (including furrows, irrigation ditches, roadways). The perimeter of the application block is the border that connects the outermost edges of total area treated with the fumigant product.	-	↑ en Beds/Strips a:	↑ is not treated

The certified applicator must make a copy of the FMP must be made immediately available when requested by local/state/federal/tribal emorgenc	
	 Respirator make, model, type, style, size, and cartridge type SCBAs Respirator make, model, type, style, size Other PPE For handlers: Confirmation of receipt of Fumigant Safe Handling Information. For certified applicator(s) supervising the application: Completion date and location of the soil fumigant training program listed on the following EPA website <u>www.epa.gov/fumiganttraining</u> for the active ingredient(s) in this product. For handlers designated to wear respirators (airpurifying respirator or SCBA): date of medical qualification to wear a respirator, 	The certified applicator must make a copy of the FMP immediately available for viewing by handlers involved in the application. The certified applicator or the owner of the application block must provide a copy of the FMP to any local/state/federal/tribal enforcement personnel who request the FMP. In the case of an emergency, the FMP must be made immediately available when requested by local/state/federal/tribal emergency response and enforcement personnel. The certified applicator supervising the application must ensure the FMP is at	

	 Post-Application Summary The Post-Application Summary must contain the following elements: Actual date and time of the application Application rate Size of application block Weather Conditions o Summary of the National Weather Service weather 	 Any deviations from the FMP (e.g., changes in emergency response actions, changes in handler information, changes in handlers responsible for completing emergency tasks, changes in communication between certified applicator, owner, and other handlers). Record-Keeping Procedures
	forecast during the application and the 48-hours after the application is complete including: • wind speed, and • air stagnation advisory (if applicable).	The owner of the application block, as well as the certified applicator supervising the application, must keep a signed copy of the Post-Application Summary for 2 years from the date of application.
	 o Forecast must be checked on the day of, but prior to the start of the application, and on a daily basis during the application if the time period from the start of the application until the application is complete is greater than 24 hours. Tarp damage and repair information (if applicable): o Date of tarp damage discovery, o Location and size of tarp damage, o Description of tarp/tarp seal/tarp equipment failure, and o Date and time of tarp repair completion. Tarp perforation/removal details (if applicable): o Date and time tarps were perforated, o Date and time tarps were removed, and o Record if tarps were perforated and/or removed early. Describe the conditions that caused early tarp perforation and/or removal. Complaint details (if applicable): o Person filing complaint (e.g., on-site handler, person off-site), o If off-site person, name, address, and phone number 	Spill and Leak Procedures In case of a rupture of hose or fitting while applying fumigant, immediately stop tractor and motor. Evacuate everyone from the immediate area of the spill or leak. Wear the personal protective equipment specified in the <i>Personal Protective Equipment (PPE)</i> section of this labeling for entry into affected area to correct problems. Approach from upwind to make necessary repairs. Do not enter area without the required PPE until the spill has evaporated or the leak has been fixed. Contaminated soil, water, and other cleanup debris is a toxic hazardous waste. Report spill to the National Response Center (800-424-8802) if the reportable quantity of 1,000 lbs. is exceeded.
parcode area	 of hon-site person, hame, address, and phone humber of person filing complaint, and o Description of control measures or emergency procedures followed after complaint. Description of incidents, equipment failure, or other emergency and emergency procedures followed (if applicable). Air monitoring results: o When sensory irritation was experienced: Date, time, location, and handler task/activity where irritation was observed and Resulting action (e.g., cease operations, continue operations with air-purifying respirators, implement Emergency Response Plan). o When using a direct read detection device: Sample date(s), time(s), location(s), and concentration(s), Handler task/activity monitored (if applicable), and Resulting action (e.g., cease operations, continue operations with air-purifying respirators, implement Emergency Response Plan).
